

# Project Proposal: ProjectsHub

A Central System for University Student Projects

## Executive Summary

Every year, university students create hundreds of valuable final projects, research papers, and software applications. However, once students graduate, their work often gets lost in personal drives, emails, or old USB sticks.

**ProjectsHub** is an easy-to-use online platform that collects, organizes, and displays all student academic projects in one central location. It gives students a place to submit their work, gives administrators full control over project data, and gives the public a searchable repository to see the university's best achievements.

## 1. The Problem

Universities currently face three main problems with student projects:

- **Lost Work:** Student research and projects disappear after graduation because there is no single place to store them.
- **Extra Work for Staff:** Department heads and teachers have to manually track projects, student teams, and advisors using spreadsheets or paper forms.
- **Hidden Talent:** Companies and recruiters rarely get to see the impressive projects built by students, missing out on hiring opportunities.

## 2. The Solution

**ProjectsHub** brings everything together into one simple website with three main sections:

| PROJECTSHUB                 |                             |                       |
|-----------------------------|-----------------------------|-----------------------|
| STUDENT PORTAL              | ADMIN DASHBOARD             | PUBLIC SHOWCASE       |
| • Upload projects           | • Manage departments        | • Search all projects |
| • Add team members          | • View reports & statistics | • Filter by tech/year |
| • Keep files safe documents | • Control privacy settings  | • Download            |

## 3. How It Works for Each User

### 3.1 Students

- **Easy Submission:** Students log in using their Student ID and password to upload their projects in a few simple steps.
- **Group Support:** One project can easily link multiple team members so everyone gets credit for the work.
- **Complete Portfolio:** Students can attach project reports (PDFs), presentation slides, and links to source code.
- **Account Safety:** The system reminds students to change default passwords on their first login to keep accounts secure.

### 3.2 Administrators (University Staff)

- **Full Organization:** Staff can easily arrange projects by Faculty, Department, Program, Class, and Graduation Year.
- **Simple Dashboard:** View total project counts, popular technologies used, and student activity at a glance.
- **Privacy Control:** Admins can choose what information is visible to the public (for example, hiding student phone numbers or private files).
- **Password Resets:** Staff can quickly reset passwords if a student gets locked out.

### 3.3 Public Visitors (Recruiters & Guests)

- **Instant Search:** Anyone can search projects by keyword, technology, year, or department.
- **Project Details:** Visitors can read project summaries, see who built them, and download approved documents.

## 4. Main Benefits

| Who Benefits?          | Key Benefit                                                                                                      |
|------------------------|------------------------------------------------------------------------------------------------------------------|
| University Leaders     | <b>Protects University Output:</b> Keeps a clean, permanent archive of all student work across every department. |
| Department Staff       | <b>Saves Time:</b> Removes the headache of collecting project files manually over email or flash drives.         |
| Students               | <b>Career Boost:</b> Provides students with a real online link to show their projects to future employers.       |
| Recruiters & Employers | <b>Talent Search:</b> Makes it easy for local and international companies to find top-performing                 |

|               |             |
|---------------|-------------|
| Who Benefits? | Key Benefit |
|               | graduates.  |

## 5. Flexible File Storage

To keep things simple and cost-effective, **ProjectsHub** can connect to whatever file storage system the university already uses:

- **Cloud Storage** (such as Amazon S3 or Google Cloud)
- **University Servers** (local network drives)
- **GitHub** (for code repositories)

Students do not need to worry about storage technicalities—they simply upload their files, and the system handles the rest.

## 6. Project Rollout Plan

To ensure a smooth transition, the project will be built in two clear phases:

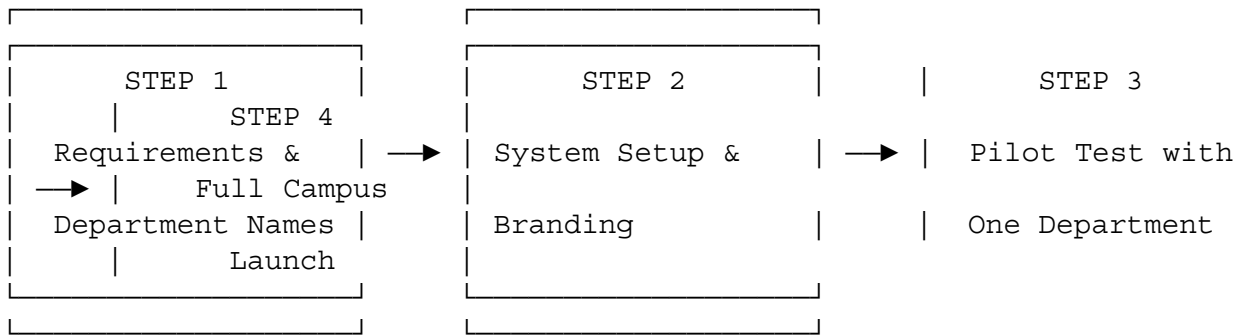

### Phase 1: Core System (Launch)

- Student login and simple submission form
- Admin management tools for departments and accounts
- Public search website with filters
- Basic file storage setup

### Phase 2: Future Additions

- Detailed charts and reports for university leadership
- Log in using existing Google or Microsoft school accounts
- Automatic checks for duplicate projects

## 7. Next Steps & Timeline

1. **Planning:** Confirm faculty names, department structures, and university logos.
2. **Setup:** Configure user roles, admin accounts, and storage preferences.
3. **Testing:** Test the platform with one department to gather quick feedback from staff and students.

4. **Full Launch:** Open the platform to the entire university.

## Summary

**ProjectsHub** converts scattered student assignments into a clean, searchable, and professional university showcase. It reduces administrative work, protects institutional knowledge, and gives students a proud portfolio to launch their careers.
